## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-27, drawn to method of protecting fire sprinkler riser system, classified in class 137, subclass 377.
- II. Claims 28-37, drawn to unitary riser for use in at least one fire sprinkler system, classified in class 137, subclass 286.
- III. Claims 38-42 and 46-48, drawn to flow switch system for monitoring water flow through at least one fire sprinkler system, classified in class 73, subclass 861
- IV. Claims 43-45, drawn to unitary riser system comprising at least one integral backflow valve, classified in class 137, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group III has separate utility such as measuring the flow rate of a fluid in capillary tube. . See MPEP § 806.05(d).

Art Unit: 3753

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one Group is not required for another Group, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
